

Lecture notes for chapter #13 (Groups: general groups and Lie groups) have been distributed. Some aspects are marked as “Easter eggs”, namely, as exercises left for the reader. Work through the lecture notes, and do as many of these exercises as possible.

The Easter eggs are not well hidden, but it is still incumbent on you to find them, as you go through the lecture notes.

Remark: Group theory will *not* be part of the final exam, but this does not change the fact that chapter 13 is very important in a wider context.

The tasks are due on Thursday, 12–DEC–2024.
